

5 REASONS WHY TRAFFIC DATA IS IMPORTANT

Keep drivers safe with early warnings

Any adverse conditions that could cause an accident, such as **weather** or **traffic build-ups**, are **instantly** communicated to the driver ahead of time, allowing them to brake early with plenty of room for stopping.

DANGER AHEAD

Begin slowing down now

Provide a detailed view of the route ahead for peace of mind

Drivers have complete oversight in their route planning and can make changes depending on their **route preference** - allowing them to concentrate when they get on the road.

Accurate ETAs to boost customer satisfaction

Once on-route, ETAs can change depending on unforeseen conditions. Avoid late deliveries and dissatisfied customers by **keeping the whole supply chain up to date** and work to ensure customer SLAs are reached.

NEW DELAY

Updating ETA Schedule

ETA UPDATED

Recipient notified

Improved efficiency with realistic drive times

Traffic uses both **live** and **historical traffic data** to calculate travel time, ensuring drivers don't waste time and money.

SLOWEST

FASTEST

Automatically provides an alternative route suggestion to stay on plan

Severe delays or road closures that occur enroute don't need to affect the journey. Drivers can quickly **calculate an alternate faster route** that helps them to avoid traffic entirely.
